17

## We claim:

5

- A metered dose Inhaler having part or all of its internal surfaces coated with one or more fluorocarbon polymers, optionally in combination with one or more non-fluorocarbon polymers, for dispensing an inhalation drug formulation comprising beclomethasone dipropionate or a physiologically acceptable solvate thereof, and a fluorocarbon propellant, optionally in combination with one or more other pharmacologically active agents or one or more excipients.
- 10 2. An inhaler according to Claim 1 containing said drug formulation.
  - 3. An inhaler according to Claim 2 wherein said drug formulation further comprises a surfactant.
- 4. An inhaler according to Claim 2 or Claim 3 wherein said drug formulation further comprises a polar cosolvent.
- 5. An inhaler according to claim 2 wherein said drug formulation comprises
  0.01 to 5 % w/w based on the weight of propellant of a polar cosolvent, which
  formulation is substantially free of surfactant.
  - 6. An inhaler according to Claim 4 or Claim 5, wherein the polar cosolvent is ethanol.
- 7. An inhaler according to any one of Claims 2 to 6, wherein said drug formulation comprises beclomethasone dipropionate or a physiologically acceptable solvate thereof in combination with salmeterol or salbutamol or a physiologically acceptable salt thereof.
- 30 8. An inhaler according to Claim 2, wherein said drug formulation comprises

  (a) beclomethasone dipropionate monohydrate, the particle size of substantially all the monohydrate being less than 20 microns:
  - (b) at least 0.15% by weight of the formulation of water in addition to the water of crystallisation associated with the monohydrate; and

5

30

## (c) a fluorocarbon propellant.

- 9. An inhaler according to Claim 8, wherein the formulation further comprises 0.05 to 3% w/w based on the propellant of a polar cosolvent.
- 10. An inhaler according to Claim 9, wherein the polar cosolvent is ethanol.
- 11. An inhaler according to Claim 2, wherein said drug formulation consists essentially of beclomethasone dipropionate or a physiologically acceptable solvate thereof, optionally in combination with one or more other pharmacologically active agents, a fluorocarbon propellant and 0.01 to 5 % w/w based on the propellant of a polar cosolvent, which formulation is substantially free of surfactant.
- 15 12. An inhaler according to any one of Claims 2 to 11, wherein the fluorocarbon propellant is 1,1,1,2-tetrafluoroethane or 1,1,1,2,3,3,3-heptafluoron-propane or mixtures thereof.
- 13. An inhaler according to Claim 12, wherein the fluorocarbon propellant is 1,1,1,2-tetrafluoroethane.
  - 14. An inhaler according to any one of claims 1 to 13 comprising a can made of metal wherein part or all of the internal metallic surfaces are coated.
- 25 15. An inhaler according to Claim 14 wherein the metal is aluminium or an alloy thereof.
  - 16. An inhaler according to any one of Claims 1 to 15, wherein said fluorocarbon polymer is a perfluorocarbon polymer.
  - 17. An inhaler according to Claim 16 wherein said fluorocarbon polymer is selected from PTFE, PFA, FEP and mixtures thereof.

- 18. An inhaler according to any one of Claims 1 to 17, wherein said fluorocarbon polymer is in combination with a non-fluorocarbon polymer selected from polyamideimide and polyethersulphone.
- 5 19. An inhaler according to any one of Claims 1 to 18 comprising a substantially ellipsoidal base.
  - 20. A metered dose inhaler system comprising a metered dose inhaler according to any one of Claim 1'to 19 fitted into suitable channelling device for oral or nasal inhalation of the drug formulation.
  - 21. Use of a metered dose inhaler system according to Claim 20 for the treatment of respiratory disorders.
